

# The Cross – Company Cloud Solution for Managing Returnable Transport Packaging and Containers

## New Innovation to create savings by logging the exchange of returnable pallets and containers

The solution is an alternative to traditional paper-based processes and provides an open and transparent review of container exchanges between all partners.

The data is stored electronically (in the cloud) whilst also providing a feed of the asset values into SAP and other ERP systems .

The solution saves organisations significant revenue by accounting for the exchange of pallets and other transportation assets - saving time and money for booking agents.

The platform facilitates the exchange of the returnable transport assets with 24/7 availability from an app running on a PC or any mobile device.

iRetPlat (integrated returnable system platform) is the first cloud platform from FIS-iLog for the transport logistics industry.

## iRetPlat is a cross-organisation platform that has been engineered to simplify and reduce the cost of the management of pallets and other returnable transport containers .

iRetPlat enables a straightforward, innovative and future - proofed, management of multiple transport packages .

In the logistics industry there are disparate systems with few general process standards.

In addition high administrative expenses and high costs for the recovery of reusable transport packaging.

With iRetPlat, integration becomes easier and standards become applicable.

The platform significantly removes complexity and improves logistical processes.

- Reconciliation of returnable assets within ERP, accounts software, or logistics management software.
- Clearing procedure for all participants using workflows (or running automatically in the background).
- Authorisation procedure.
- Further activities such as services, recovery or quality categories.
- Smart services for the collection of the diverse information required for transparency of stocks and transport streams.
- Big data management with the latest technology based on SAP HANA.
- Scalable solution through cloud concept - inter-company and cross organisations.
- Transparent pricing model -based on annual transaction model.
- The platform is also able to integrate with SAP and other ERP systems

## Cross Company Exchange

As the platform is cloud-based, it is accessible by all organisations within the supply chain including:

- goods manufacturers
- freight forwards
- distribution centers
- wholesalers
- retail outlets.

## Leading-Edge, High Availability Platform

The hosting platform for iRetPlat is based on HANA the leading in-memory technology from SAP. As a result the cloud application has high availability with virtually instant response times.

The access to the solution has been developed using SAP Fiori app standards which ensures that users work with simplified and intuitive designed screens.

## GS1 UK Industry Standards

The platform supports all GS1 standards for the transport and logistics industry including:

- GLN (Global Location Number)
- GRAI (Global Returnable Asset Identifier for barcodes)
- RFID (Radio Frequency Identifier)
- EDI (Electronic Data Exchange)

FIS Informationssysteme  
und Consulting GmbH

## SAP / ERP / Accounts Software Integration

iRetPlat cloud provides a universal exchange function between different ERP and accounting solution.

Each shipping container has a financial value and iRetPlat also manages the volume of assets available at any given time.

iRetPlat is ERP "indifferent" - FIS mapping technologies are available for ERP systems.

## Clearing

The exchange of returnable transportable packaging is cleared automatically.

The platform provides an on-line stock view of crates, containers and pallets in real-time assisting with delivery planning.

Organisations not subscribing to the platform also receive statements and agreements from active participants via email.

Standard functions are included for requesting activities such as services, replenishment and materials requirement.

Returnables quality is also recorded and the solution recognizes all standard returnables such as wooden, fiberglass, heavy duty and plastic pallets, dolavs, roll-cages, IBC bunds .....

## Subscription — Membership

The solution is available to organisations with transport / logistics interests in UK/Europe.

There is an "onboarding" consultancy fee depending on the level of functionality required and back-office ERP integration.

## FIS Information Systems

FIS are the largest developers of SAP technologies in Europe and one of SAP's leading global partners with Gold Partner status. FIS have more than 20 years experience within industrial and logistics industry and more than 500 customers.

With our partners SAP SE, FIS focus on performance and innovation for business applications.

The iRetPlat solution is a secure open cloud platform, providing a 24/7 availability from any desktop or smart mobile device.

The platform serves all transactions in UK and the European mainland.
