⧄ FIS

Note

The specifications and information by FIS Informationssysteme und Consulting GmbH contained in this document are without obligation and non-binding. The information represents only an extract and reflects the current status. FIS expressly reserves the right to make subsequent changes to these specifications and information. The specifications and information in this document represent confidential information of FIS and must be kept secret by the recipient. In particular, the passing on of these specifications and information to third parties is prohibited.

The application and its benefits

The changing demands on Industry and Commerce 4.0 also involve an increase in data volume. The data quality significantly influences the value added of an SAP system and data becomes an important production factor with highest quality standards - arguments justifying an improvement of data handling with FIS/mpm, the SAP optimization for efficient master data management.

The FIS optimization supports you in maintaining master data in SAP even before the data is transferred to the production FIS system and, therefore, significantly increases data quality. The data is only transferred to the system after successful validation and execution of check routines. As a consequence, **simple, fast and flexible master data management in SAP** is the central advantage of FIS/mpm.

- Continuous and sustainable increase in data quality and currentness
- Efficient master data creation and maintenance through system-guided workflows
- Easy operability due to clear user interfaces and role-based views
- Strengthened governance and compliance due to clear responsibilities, documentations and approvals
- Support and preparation of the S/4HANA transition through the consolidation and conversion of master data
- Process optimization: The FIS/mpm functionalities as well as the FIS professionals provide assistance with as-is analyses and the modeling of target processes

FIS/mpm NextGeneration Release Highlights

2025 – Latest developments

Modernization of the user interface

The user interface of the FIS/mpm tool for material master maintenance, document maintenance aswell as business partner maintenance was rearranged into the current UI5 design und made available in a Web user interface to increase user-friendliness once more.

Optimization of the workflow function

For FIS/mpm NG, the workflow function was optimized. Now, a preassignment of worklist fields is possible as well by using a new workflow task, which will result in an additional efficiency gain.

Optimization of the approval process

Furthermore, the approval process in the previous Web forms was optimized once more.

FIS/mpm NextGeneration Release Highlights

2025 – Latest developments

Easy creation of document info records from the material master and business partner maintenance tool

In the material master and business partner maintenance tool, attachments can now also be created as document info records in SAP and automatically linked with the master record.

Easy check of field contents

Due to freely configurable checking rules, an easy and, if required, automatic check of field contents is enabled now.

FIS/mpm Cloud for Material Master - Release Highlights

Provision of the material master maintenance tool in the cloud

FIS/mpm Cloud for material master is provided as a public cloud solution in the status of a minimum viable product (MVP); however, a workflow functionality is not yet available here.

Enhancement by new individual view maintenance

Via a new individual view maintenance, all existing views of a material master including its purchasing info record and the associated conditions can be maintained in one user interface. Attachments can be added and optionally created as document info records as well.

Enhancement by fast entry function

The "Fast entry" function of master records can be used to fill relevant fields and views faster via the individual view maintenance and partially even preassign them automatically.

FIS/mpm Cloud for Material Master - Release Highlights

2025 – Latest developments

Easy check of field contents

Due to freely configurable checking rules, an easy and, if required, automatic check of field contents is enabled now.

Integration of a dashboard

Furthermore, a dashboard was integrated in FIS/mpm for material master maintenance to obtain valuable evaluations and KPIs.
